Faqirwali weather report

What about this weather? James Parker October 2020 Tim LahanThe correct answer to the question How are you? not too bad. Why? Because that's all purpose. Whatever the circumstances, whatever the conditions, not too bad will help you overcome. In good time it projects a decent pessimism, an Eeyore-ish reluctant to get carried away. On an average day it bespeaks a muddling-through modesty. And when everything is rough, really rough, it becomes a heroic word. Best of all, with three equally tense syys, it gently forestalls asking for more information, because it is- basically- nonsense. Small talk is rhetoric too. Americans in particular are small talk artists. They have to be. This is a wild country. The flimsiest strands of consensus and cooperation attach a person to the next. So have a nice, hot enough day for you, how the Metses' bout served an important purpose. Without the emollient little go-nowhere phrases and temporary social contracts they represent, the streets would be a free for all, a rodeo of disaster. But that's a negative view. Some of my most radiant interactions with other human beings were fleeting, glancing moments of small talk. It's an extraordinary thing. A person standing in front of you, unknown, a complete stranger and merest-morsel everyday words can tip you headfirst into the brilliant void of his soul. I was walking the other day when a UPS truck rumbled massively into the curb in front of me. As the driver jumped from his taxi for delivery, I heard music inging from the truck's speakers—a familiar, weightless stream of blues-rock noodles. There is a certain space sparkle in the above registers, a certain fragility in the rhythm part ... Have. It has to be. The Grateful Dead, in one of their live recordings. And I know the song. It's my favorite Dead song. 'Chinese cat sunflowers'? I told the UPS guy when he recharged his truck. A big smile: You got it, babe! The exchange of energy, the perfect understanding, the freemasonry of Deadhead-ness that flashes instantly between us, and most of all the honor-babe-I was as tall as a kite for the next 10 minutes, projected into the sky on a pure beam of small talk. Weathertron, by Ryan Lucas and Kevin Lynagh, may have found the sweet points. It's an iPhone app that sucks up 16 different weather sources, then translates relevant information into clear data visualizations We have not set out a clear way to design a minimal or maximum user interface for this application, Lucas told Co.Design. We just want to communicate the most useful information as quickly as possible. At first glance, you can by bar graphs and cloud gradients, but like any well-designed infographic, within a few minutes you speak its language. A one-page daily forecast is basically a scorable timeline. Different layers of information run from top to bottom. And move your thumb left to right to bring you in the future. At the top of the screen, you see the most basic problem for the moment as clear and 62 degrees. If you want to do a closer study, it's your weather report. As your eyes glide down the page, the next thing you reach is a chart that covers the cloud throughout the day. Instead of conveying cloud levels as a percentage, Weathertron has cloud icons of five different opacities. One bonus here is that they actually look like clouds, Lucas explains, so not only is it visually easier to analyze syntax than a number table, it looks a heck of a lot better. Below is a graph of precipitation. Again, instead of pulling up some chance of percentage of rain, the app spells out how much rain is supposed to be in an hour-by-hour bar graph. But that's just part of the utility, because the way that graphs are calculated is actually a bit of a cognitive hack. Since folks plan their day around either 'a sprinkle of rain' or 'a rain', the rain bars are shrinking logarite instead of linear, Lucas writes. That way, when there is any rain, users can see it, but if there is a ton of bars will not uselessly soar off the top of the leaderboard. Finally, you achieve a simple line graph of temperature forecasts. The highs and lows are marked, but to keep the image clean, you'll really need to rub through with your thumb to find the exact time of all this temperature. Your eyes are then pulled right back to the top of the page—that's clear and forecast 62 degrees, or maybe 50s and rain tonight. (A quick swipe of the screen pulls up the forecast tomorrow. And a seven-day forecast is always just a tap away.) You may be wondering, why go through this entire graphics series if all you want to know is the weather report? Well, like any useful data visualization, Weathertron is a medium between appearance and information to create something more sensitive through context. You can step back and see all the data in the concert and actually see the relationship, Lucas explained. Like a rapid drop in temperature, accompanied by rapid cloud gathering cover and a large precipitous spike can represent a storm. We really didn't see a lot of other apps or weather reports of any kind coming at the data with this intuitive approach. Weathertron is in the App Store now for \$1.Download it here. Tuesday, December 8, 2020, 5:33 PST by Joe RossignolApple today introduced a new wireless over-ear headset called AirPods Max, with features main covers high-altitude audio, Adaptive EQ, Active Noise Cancellation and singling sound. Priced at \$549, headphones can be ordered starting today Apple.com and in Apple App with the available starting December 15. AirPods Max has 5 colors, including space gray, silver, sky... Photo: ShutterstockAlexa has a few new commands that can help you prepare for dangerous weather or potential traffic conditions. These features have actually been around for a few weeks —Amazon quietly put them on Alexa-enabled devices last month— but since the company didn't mention updates until recently, most people didn't notice them. Take a look at all the new features you may have missed. Extreme weather alerts and traffic updates While February saw some new features added to Alexa, the two most notable features are automatic extreme weather alerts and traffic reports for your phone. We will start with the weather notice. Alexa can now give users a warning if an active extreme weather alert is in place where they live. Tell me about the severe weather alerts that will turn on this feature. Alexa will now automatically notify any alerts without having to ask first. This will be especially useful in areas where natural disasters or seasonal extremes are common. You can also turn it off by asking Alexa to cancel a severe weather alert. As for traffic updates, you can now get updated traffic reports by asking Alexa, how is traffic? You can also ask about traffic conditions along specific routes or destinations, then send a report to your phone by saying Alexa, send it to my phone. You can also use phone notifications to start your driving navigation app. G/O Media may receive a commissionNew event recapsThe last few updates are smaller but still worth pointing out. Alexa users can now ask the assistant to summarize NBA games, as well as highlight from other television debates and 2020 election events. You also to get direct access to some of the new Amazon Prime Video content added, including Hunters, Honey Boy, and more by asking Alexa to play the specific series or movie you want to watch (as long as the Alexa device is connected or supports video play back). play back).
